Motivation Letter

I am Iyamuremye Sergine, a student at Rwanda Coding Academy with a focus on software engineering and UI/UX design. I am applying for internship opportunities where I can contribute to real-world projects while continuing to develop my technical and problem-solving skills.

My approach to technology is practical and impact-driven. I focus on building systems that solve real problems while ensuring they are usable and well-designed. I have worked on several projects, including Nyumba, a housing platform addressing accessibility challenges, and MedGate, a system connecting patients to verified healthcare providers. These projects strengthened my ability to design, develop, and deliver functional applications.

During my internship at Cylacon, I worked as a UI/UX and frontend developer, where I designed interfaces and implemented responsive components. This experience improved my ability to translate design ideas into working products and collaborate effectively with other developers.

In addition, I won first place in the Cyberlympics Rwanda competition at the Africa Cyber Defence Forum, which tested my ability to solve technical challenges under pressure. I also presented an AI-powered satellite monitoring system at Rwanda Space Agency Space Week, demonstrating my ability to apply technology to real-world scenarios.

I am motivated to join a team where I can contribute, learn, and grow through hands-on experience. I bring strong technical foundations, practical project experience, and a commitment to building meaningful systems.

Thank you for your time and consideration.

Sincerely,
Iyamuremye Sergine
