SUMMARY

Full-stack developer and UI/UX designer who builds complete products end to end, from Figma to production. I currently build features for a national regulatory platform at Rwanda's National Health Intelligence Center using React, TypeScript, Tailwind CSS and NestJS. My background in both design and engineering means designs ship as designed: fewer handoff gaps, faster delivery, no surprises.

SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, Tailwind CSS, responsive & accessible UI
Backend & APIs	Node.js, NestJS, Express, REST APIs, Spring Boot, Flask
Databases	PostgreSQL, MongoDB (Mongoose), MySQL
AI & Automation	Gemini API, LLM structured (JSON) output, AI PDF parsing, automated screening workflows
Design	Figma, wireframing, prototyping, usability reviews
Quality & DevOps	Jest, code review, Git, Docker, Kubernetes, npm/Turborepo monorepos

EXPERIENCE

- Software Engineer, Full-Stack** · National Health Intelligence Center (NHIC), Rwanda Aug 2026 – Present
- Build frontend and backend features for the Rwanda FDA Inspection Platform (RFIP), a national system digitizing regulatory inspection workflows
 - Build UI with React, TypeScript and Tailwind CSS, and APIs with NestJS and PostgreSQL, in a Dockerized monorepo
 - Ship role-based dashboard features that give each user a personal, actionable view of their work
 - Write and maintain Jest tests; contribute through code reviews in a merge-request workflow
- Software Engineering Intern, UI/UX & Frontend** · Cylacon 2026
- Designed and built client-facing interfaces for MedGate and Nyumba in React and TypeScript, from Figma mockup to deployment
 - Ran usability reviews of existing products and delivered usability and accessibility improvements
 - Worked with backend engineers to ship new product features across devices

PROJECTS

- Pulse: Emergency Response System** · Backend lead, hackathon team Case study: [sergine-portfolio.vercel.app/work/pulse](#)
[React](#) · [Node.js](#) · [PostgreSQL](#) · [Google Maps API](#)
- Led the backend of a system that locates patients by GPS, matches them to the nearest hospital with free ER capacity, and dispatches an ambulance or community driver on an optimized route
 - Built real-time notifications for patients, hospitals and drivers, plus a pre-arrival handover of key patient details (blood type, insurance)
 - Mentored by Dr Awet Fesseha; recognized for tackling real gaps in Rwanda's emergency care
- AI Job Screener** · Solo [github.com/Serginey/ai_job_screener](#)
[Next.js 16](#) · [TypeScript](#) · [Tailwind CSS](#) · [MongoDB](#) · [Gemini API](#)
- Automated résumé screening: Gemini reads uploaded PDFs into structured candidate data and ranks every applicant against a weighted rubric, with a score, strengths, gaps and a recommendation
 - Enforced schema-based JSON output and validated responses before saving, so AI failures show a clear retry message instead of corrupting data
- MedGate: Healthcare Access Platform** · Cylacon Live: [medgate.rw](#)
[React](#) · [TypeScript](#) · [PostgreSQL](#)
- Built a platform connecting local and international patients to verified hospitals, with secure authentication, request matching, appointment scheduling and hospital profile management
- Nyumba: Property Marketplace** · Cylacon Live: [kunyumba.site](#)
[React](#) · [TypeScript](#) · [Node.js](#)
- Built a mobile-first marketplace for affordable housing in Rwanda, with listings, search and filters

EDUCATION

Rwanda Coding Academy 2023 – 2026
Software Engineering, Embedded Systems & Cybersecurity

LANGUAGES

Kinyarwanda (native) · English (fluent) · French (intermediate)

AWARDS & CERTIFICATIONS

- 3rd Place, Cyberlympics Rwanda, Africa Cyber Defence Forum (2024)
- AI satellite-monitoring project presented at Rwanda Space Agency Space Week (2024)
- Kigali Hacks Finalist (2024)
- Cybersecurity Certification, Cyberium (2024)
